

Community Energy Plan Audit

S. Burnett & Associates Limited has been working with Curve Lake First Nation on the Curve Lake First Nation Community Energy Plan project. The project is funded by the Independent Electricity System Operator (IESO) through the Aboriginal Community Energy Plan (ACEP) program. A community energy plan is a long-term community plan to improve energy efficiency, reduce electricity consumption, and assess opportunities for green energy solutions.

At this time we would like to notify the community about an upcoming **Community Energy Audit** to be scheduled for **December 6th, 2016**. A representative from S. Burnett & Associates Limited will conduct a free energy audit of your home that will take approximately 30 minutes to complete.

Identify ways to improve energy efficiency and reduce electricity consumption

Evaluate options for green energy solutions

Manage energy costs for the community and its members

The residential energy audit will include a visual inspection of your home's heating/cooling systems and electric usage (appliances, lighting, etc.) to determine the overall energy consumption of your home.

Knowing this can help you save and reduce energy consumption in the future!

If you have any questions and are interested in participating in the residential energy audit, please do not hesitate to call Peter Luce or Dillon Bickell at (705) 329-2959 or e-mail Dillon at dillon.bickell@sbaengineering.com.
